- Insurers transacting in multiple geographies and currencies

Key Functionalities

Interactive dashboards cover transaction analysis, employee productivity, lifetime value of customers, and department-wise details. The dashboards encompass views of general ledger, trial balances, balance sheets, income statements, and expenses.

The operational reporting suite offers reports of general ledgers, sub-ledgers, main account trial balances, sub-account trial balances, outstanding statements, and receivable and payable aging analysis. These reports are readily customisable and can be downloaded in MS Excel or pdf formats.

Document and integrated workflow management functionality enables users to automate the transfer of outstanding statement reports to customers, without human intervention and in a paperless manner.

Built-in United Nations Security Council (UNSC) sanctions list based customer validation is an easy-to-use and configurable reporting engine which meets the certified security standards. Its open and close accounting periods brings monthly closure discipline, with the results downloadable into MS Excel.

Search engine enables user to locate specific voucher numbers, current or previous year documents, and other miscellaneous documentation. Users can search by policy or claim number, customer name, date range, or even transaction type.

Monthly currency revaluation and translation use case gives you the option to upload vouchers through MS Excel or API integrations and includes email integration to schedule reports and expenses.
