The Anoud+ Advantage: Exclusive Features

Spare Parts Image-Processing and History

Surveyors can select spare parts from images and verify the required quotations. The spare part pricing data is used for future claims.

Auto Depreciation and Excess during a Motor Claim Process

Based on policy wordings, depreciations and deductions which are based on multiple requirements within the policy, are automatically computed in the motor claims process.

Smart Email Alerts

Smart emails welcome managers at the start of every workday. There are also automated messages to managers' inboxes with year-to-date, month-to-date, and daily production levels.

Key Functionalities

Multivariate motor insurance tariff engine to calculate premiums for basic, mandatory, and optional coverage.

Customisable emails and text messages to share with select customers or send in bulk to existing and prospective clients.

Premium instalment payment functionality customisable for specific lines of business.

Seamless data transfer to insurance regulators that can be automated and carried out in real-time.

Web services for each underwriting process.

Easy and fast insurance product placement on third-party points of sale.

Customisable product bundling such as; motor and home insurance bundle or travel and smartphone insurance bundle.

Generate management information reports seamlessly to facilitate decision making.

Client loyalty schemes to enable customers to earn and redeem reward points from the company's loyalty membership schemes.
